The answers you
want for the times
when you really
need them.

www.gal.com

In addition to world class products, GAL provides complimentary customer training classes at our Bronx, NY facility. Here attendees learn in detail about product design features, installation procedures, code requirements, and pick-up tips from the engineers who design and work with GAL products daily.

Classes are held on a monthly basis with separate course offerings covering GALaxy Controls, GAL Door Equipment, and Hollister Whitney Rope Grippers. Should you require a class to accommodate a large group, organization, or to review additional products, we can easily customize an event to fit your needs. Installation, maintenance technicians, and sales personnel could greatly benefit from these courses.

Course Topic: GALaxy Controls

Average Time: 4 - 5 Hours

Attendees will receive an in-depth look at the entire family of GALaxy Controllers, but this class will focus primarily on our new **GALaxy IV** controller. Topics include product features, design, installation, adjustment, and vital troubleshooting

tips. The class also provides Q&A segments to engage with GALaxy engineers and staff.

Course Topic: GAL Door Equipment

**Average Time:
1.5 - 2.5 Hours**

Attendees learn about GAL Door Equipment features and benefits, and receive guidance on proper installation, adjustment and troubleshooting procedures. The course covers the **GAL LWZ-2** series clutch and zone locking device, as well as **MOVFR** and **MOVFE 2500**

linear and harmonic series operators. Instructors will review key code compliance issues including the Kinetic Energy code requirements.

Attendees will be able to direct specific questions to GAL door equipment design and support teams during the Q&A session.

Course Topic: Hollister-Whitney Rope Gripper®

Average Time: 1 - 2 Hours

Attendees will develop an understanding of the design principles, code compliance issues, installation techniques, and maintenance requirements behind North America's most widely used emergency brake.

As emergency brakes are still somewhat new to industry technicians, the course offers professionals a way to familiarize themselves with the device's operating principles before they encounter it in the field. Here one can learn how to avoid common mistakes and pick up tips that would prove beneficial for specifying or installing Rope Gripper® technology.

Reserve A Place Today.

GAL courses fill up quickly. Call 877. 425. 7778 or register on-line to take full advantage of this opportunity.

You will then be notified when of our next class is scheduled. We look forward to meeting you at one of our upcoming training events.
