

# The GALaxy Connection

## Spectral-Lites

### Stunning Illumination for Your Pushbuttons

GAL's dazzling vibrant and industry unique lamps provide multi-colored long life LED illumination.

With a touch of a finger, our ColorSwitch\* technology in combination with our Non-Proprietary **GALaxy** elevator control system allows any color of the rainbow and any light intensity to be field selectable.

You no longer need to change lamps in order to change the color of your button illumination – all you need are our eye popping Spectral-Lites and change is instantly within your control.

In addition to providing a distinctive architectural detail, our Spectral-Lites are perfect for those installations where you need to visually designate: on, off, secured, hospital emergency, or attendant annunciation.

## Pre-Wired Car Stations & Serial Communication

GAL fixtures, when paired with our Non-Proprietary **GALaxy** elevator control system, are available with prewired serial communication to the car station and our industry leading closed loop serial communication to the hall stations. Valuable installation time is saved and potential field wiring errors are eliminated by our in-factory assembly and quality testing.

If our **GALaxy** control is not used, we also offer prewired car stations to industry standard terminal strips which also help to save valuable field labor and reduce overall installation schedules.
