- Fits in a Normal 50" Wide Hoistway
- Includes 3-Speed Aluminum Tracks and 3-Speed Sills - 4 3/4" wide for door - 1 1/4" on center

## Safety

The MOR power door operator is the first of its kind to incorporate standard safety features that are required on all commercial elevators.

- **Adjustable Sensitive Leading Edge** - If the car doors come into contact with an obstruction - a person or object in their path - they will automatically reverse. Doors will then stand open for a time before attempting to close again. This eliminates the potential of someone being squeezed by the car doors.
- **Door Restrictors** - This is an important safety feature that keeps passengers from opening the car doors when the elevator is away from a floor. A dangerous situation is avoided with a device that has been mandated for years on commercial elevators.
- **Tamper Resistant Gate Switch** - This Feature assures that no one can intentionally or accidentally allow the car to run when the car doors are open.
- **Car Door Clutch** - This device automatically unlocks and couples the car and hoistway doors when opening and when closing locks the hoistway doors.

## Accessibility

Power doors make accessing your elevator much easier. Car doors automatically open when signaled and close to run or park when you are inside the car.

## Luxury

- **Smooth 3-speed power door operation** - doors glide open & closed
- **Quiet door movement**
- **Adaptable to door finish of your choice\*** - combine with door panels to match your home's decor
