

LWL Clutch and Interlock

**REDUCE RISK.
MAINTAIN COMPLIANCE.
MAXIMIZE AVAILABILITY.**

The LWL Clutch and Car Door Interlock package from Vantage adds another level of protection to your elevators. It combines the functionality of a gate switch and a zone lock into one device, lessening the chance of human error and circumvention when it comes to keeping your car doors closed during operation.

Retrofit quickly and easily

Designed to work with the GAL MOVFR II Harmonic Door Operator and standard MOH and MOCPH Hoistway interlock packages, the LWL Clutch and Car Door Interlock package can be retrofitted to existing installations quickly, easily—and inexpensively.

Reduce your risks

The LWL Clutch and Car Door Interlock package from Vantage is UL certified to ASME A17.1-2019 for the US and Canada. It reduces risk by combining a locking mechanism and circuit into one device to eliminate circumvention.

Are You Opening Yourself Up to Accidents?

When your elevator zone locks either don't work or have been bypassed, this not only increases the chance of your car doors opening during operation. It also opens your company up to a whole other area of headaches, including the direct costs of safety incidents, hefty fines imposed by regulators, and increased risk from hazardous installation activity. The solution? **The LWL Clutch and Car Door Interlock package from Vantage.**

BENEFITS

Seamless Integration

- Compatible with standard GAL MOH and MOC PH hatch equipment and locks
- LWL clutch is an upgraded drop-in replacement for the LWZ-2 clutch
- Retrofittable to GAL door equipment
- Follows standard GAL templates

Compliance

- Meets current interlock code requirements
- Meets ASME code requirements
- Reduces risk for elevator passengers over a traditional zone lock
- Greatly reduces the chance of circumvention of safety devices

Optimum Elevator Availability

- Quick and easy installation means minimum downtime
- Maximizes elevator availability

Installation Savings

- Eliminates the need for fascia on the hall side
- Combines the functionality of the gate switch and zone lock into one device
- Faster to install and adjust than many zone lock mechanisms
